Variable Name: PDCLASS **Length:** 1.0 **Position:** 54

Question Name:**Concept:** Global (disability) severity class**Question Text:****Universe:** Respondents aged 15 and over with a disability in all 10 provinces and the 3 territorial capitals.**Note:** Based on DSCORE.

This derived variable indicates the global severity class for respondents. Based on the global severity score, severity classes were established. Severity scores increase with the number of disability types, the level of difficulty associated with the disability and the frequency of the activity limitation. The name assigned to each class is simply intended to facilitate use of the severity score. It is not a label or judgement concerning the person's level of disability. The classes should be interpreted as follows: people in class 1 have a less severe disability than people in class 2.

Persons without a disability (DDIS_FL=2) have a value 0 for this variable, which should be treated as no disability.

Persons with a disability but for whom the severity is unknown (key questions were not answered making it impossible to derive the score, and hence the class) have a value of 9. For more information on severity scores and classes, please refer to the Canadian Survey on Disability (CSD), 2017: Concepts and Methods Guide.

Question Name:

Concept: Household lives in social and affordable housing

Question Text:

Universe: All private households in all 10 provinces and the 3 territorial capitals who indicated as living in rented housing (DCT_05 = 2)

Note: Social and Affordable Housing (SAH) refers to non-market rental housing (i.e., where housing allocation and rent-setting mechanisms are not entirely dictated by the law of supply and demand). Since SAH providers typically aim at providing housing assistance to low or moderate income households at large, examples of housing units excluded from this definition include:

- Staff housing (i.e., housing provided by the employer) or family-subsidized housing

with below-market rents

- Housing units at market-rent provided by housing co-operatives, non-profit organizations and government entities

Note that a household receiving a housing subsidy (e.g., receiving a portable rent supplement) towards any market rental of its choice is not considered to be in SAH. Due to the numerous and complex types of funding programs and agreements for SAH, households may not know that they are in SAH. The CHS collects information from the respondent about the presence of housing subsidies, the subsidy provider and the landlord to derive whether the housing is SAH. In the results of the CHS, a household is defined as being in SAH if the respondent indicates either:

1) the rent is subsidized; or,

2) the respondent reports income to determine rent assistance and the landlord is a co-operative, not-for-profit organization or government. Rent-geared-to-income housing is an example where a respondent would indicate the requirement to report income to determine rent. CHS respondents who indicate their dwelling is subsidized solely by a family member, relative or an employer are not defined as being in SAH. As well, market rental housing units provided by housing co-operatives, not-for-profit organizations and government entities are not counted as SAH in the CHS results. For households in N.W.T., because data is integrated from the NCS, a household is defined as being in SAH if either of the following occurs:

- the dwelling is SAH based on administrative data from the NWT Bureau of Statistics and the dwelling is not owned by a member of the household; or,

- the respondent indicates in the survey that income is reported to determine rent (such as in the case of rent-geared-to-income housing) and the landlord is one of the following:

o NWT Housing Corporation or a local housing organization including the North Slave Housing Corporation;

o Federal government;

o an indigenous government or band office, such as the Inuvialuit Regional Corporation, Dehcho land corporation.

As there is no widely accepted and common definition for SAH, estimates of the volume of SAH can differ from other sources because of definitional differences. For example, collective dwellings are not included in estimates from the CHS while estimates from some published sources include collective dwellings (such as seniors' residences).

Variable Name: PSTIR_GR **Length:** 1.0 **Position:** 168

Question Name:

Concept: Shelter-cost-to-income ratio, groups

Question Text:

Universe: All private households in all 10 provinces and the 3 territorial capitals excluding households on reserves, farm dwelling or household who reported a zero or negative total household income

Note: Classification of shelter-cost-to-income ratio by groups. Shelter-cost-to-income ratio refers to the proportion of average total income of household which is spent on shelter costs. The shelter-cost-to income ratio is calculated by dividing the average monthly shelter costs by the average monthly total household income and multiplying the result by 100. This variable is calculated for private households living in owned or rented dwellings who reported a total household income greater than zero. Households in dwellings located on an agricultural operation operated by a member of the household are excluded. 5 = Not applicable (households on reserves, farm dwelling, household who reported a zero or negative total household income).

Source: Canadian Housing Survey, 2021. Variable derived from STIR.

<u>Answer Categories</u>	<u>Code</u>	<u>Frequency</u>	<u>Weighted Frequency</u>	<u>%</u>
Spending less than 30% of income on shelters costs	1	31,869	11,815,382	78.3
Spending 30% to less than 50% of income on shelters costs	2	5,743	1,912,265	12.7
Spending 50% to less than 100% of income on shelters costs	3	1,669	728,095	4.8
Spending over 100% of income on shelters costs	4	379	236,273	1.6
Not applicable	5	532	262,416	1.7
